

‘I will probably never use another motor manufacturer’

‘This tool takes all the donkey work out of the process of selecting a DC motor’, Delta Motorsport

Delta Motorsport is an automotive and motorsport engineering solutions provider that works with the top motor vehicle companies. Its list of clients is most impressive, having provided design and development services from single components to complete product programmes, for Formula 1 teamsthrugh to high performance and luxurious cars. It has also designed and built several cutting edge electric and hybrid powered vehicles.

Justin van’t Hoff, Senior Electrical Systems Engineer, was looking for a low noise DC motor for one of Delta’s high-end applications, when a customer introduced him to the maxon motor Configuration tool (Configure To Order). The ability to configure the parts to suit the application, and then automatically generate performance graphs and CAD files to pass on to the design department is most impressive’.

The maxon motor Configurator enables you to assemble your individual maxon DC motor, gearhead and encoder combination online. You can configure the gear stages, the motor bearings, the shafts, the encoder and much more. After all configurations have been completed, full specifications and documentation for the configured products are generated. 2D and 3D dimensional drawings can be downloaded. A complete, ready-to-print specification document set describes your drive with a unique part no and 1-49 units can be ordered directly online.

Not only that but your finished drive will be ready to ship in 11 working days. In fact over 60% are currently shipped in less than 7 days.

If you need a customised DC motor fast, try maxon Configure To Order dcx.maxonmotor.com

About maxon motor

maxon motor is the world’s leading supplier of dc motors, brushless motors, gearheads and controllers. We offer high quality, innovation, competitive pricing and highly specialised solutions.

Where are maxon motors used today?

- Aerospace
- Robotics
- Medical science
- Industrial automation
- Instrumentation & inspection
- Communication
- Surveillance cameras
- Automotive
- Consumer applications
